

To Whom It May Concern:

It has come to my attention that there is a petition (NAB's petition 04-160) before the FCC which seeks to limit what XM Sattelite radio can offer its customers in programming. The petition specifically seeks to stop XM from providing XM Instant Traffic & Weather.

I respectfully urge that you reject this petition and any other petition that seeks to limit what any radio station of any type can provide its listeners.

If any of you at the FCC have not experienced the joy of being able to receive 100 + radio channels any place in the U.S. with digital clarity and music without advertising, you need to expose yourself to this experience. It is wonderful. My wife and I are seniors and enjoy traveling throughout the USA and it is wonderful to be able to hear our favorite radio channels on XM radio anyplace we go.

In my opinion, it should be the FCC's job to expand the possibilities for the public and not limit them.

I thank you in advance for rejecting the NAB's petition 04-160.

Sincerely,

Frank R. Radich
